

The Benefits of Purchasing a Pre-owned Electric Vehicle

Are you searching for your next vehicle? Have you considered purchasing an electric vehicle (EV), but want to spend less? Consider buying a pre-owned EV instead! Here are three reasons to consider purchasing one.

Environmental and Cost Saving Benefits

Over the course of an EV's lifetime, they produce an average of 84% less climate-warming emissions than standard cars. EVs require far less maintenance than standard cars, and fuel savings alone can save EV drivers an average of \$4,700 in the first seven years of the EV's lifetime. These cost savings are true of pre-owned EVs as well, which can be purchased at a much lower price point than a new EV.

Comprehensive Warranty

EVs generally require less servicing than standard cars. Most come with extended warranties, such as eight years/100,000 miles, and the warranty from the original purchase is transferred to the new driver that purchases the pre-owned EV. Battery replacements are very rare and if needed, are usually covered under the EV's warranty.

Reliable Range

While all vehicles (standard and electric) lose some mileage over the course of the car's lifetime, EVs still provide an impressive mileage, which improves with each new model. For example, a 2015 Nissan LEAF drives today at just 10% less range than when it was purchased new. A 2017 Chevrolet Bolt offers just 3% less range than when it was purchased new.
